

WEIGH PADS

Loadcell Supplies stocks light weight, easily transportable weigh pads.

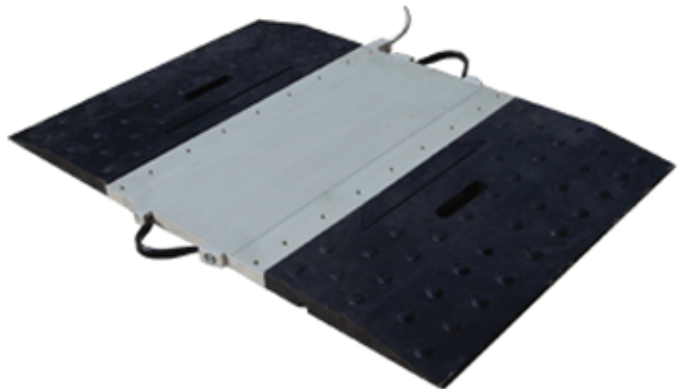

Each pad is of 15t maximum capacity. When used in pairs a 30t maximum capacity can be achieved, frequently used for axel weighing.

The pads are machined from a single plate of steel, integrated strain gauge sections giving grater reliability and accuracy. This results in high frequency in dynamic response and high precision. The pads are specially treated, making them suitable for all kinds of environments.

Each pad is mounted with a connector and protection block which makes it simple to change the cables.

Data is outputted through an indicator, which is to connect via cable.

The pads can be purchased individually or in a kit. The kit comes with 2 weigh pads and an R320 indicator. If purchased individually, an indicator will also need to be purchased (R320 \$420.00)

Capacity	Price (excluding GST)
15t - Single Pad	\$2,500.00
30t - Kit	\$5,000.00
